

Spiral Chutes

Easy Let-Down Chute With No Product Damage

- **Heavy-duty Construction**

Heavy-duty stainless or mild steel construction is used as well as continuous internal welds.

- **Gentle Product Handling**

The Easy Let-Down Spiral Chute allows the product to gently spiral down a smooth stainless steel trough without danger of breakage or damage.

- **Wide Range of Applications**

Spiral Chutes can be designed for a wide range of applications, including food and nonfood products. Just about any fragile product capable of sliding down a reasonable decline can be handled in a Meyer Spiral Chute. Chutes can be designed for straight product transfer from one level to another, or for filling bins and hoppers.

- **Sanitary**

All exposed tubing ends of the Spiral Chute are capped for added sanitation. All welds are continuous.

- **Built for Long Life**

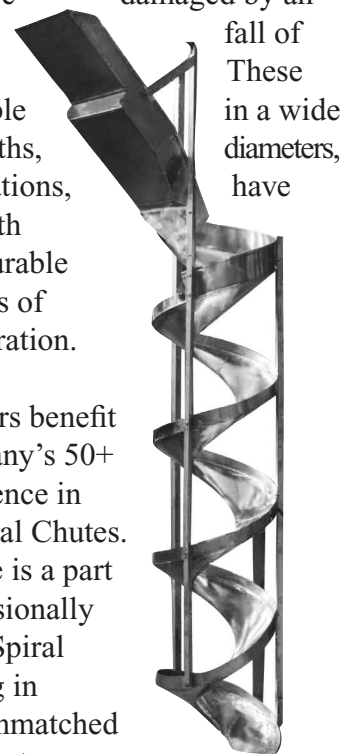

Meyer's extensive Spiral Chute experience provides the equipment with long-term integrity and quality.

- **Options to fit Specific Requirements**

Spirals are available with a center tube for straight transfer applications or an open center for use in filling a bin. Spirals can also be clockwise or counter clockwise to match the direction of flow of surrounding equipment. Starter Chutes are provided to direct material onto the main chute. Many custom options can be provided to meet specific application requirements.

Easy Let-Down Spiral Chutes from Meyer provide for gentle handling of food and non-food products that would otherwise be damaged by an uncontrolled fall of any distance.

These chutes, available in a wide range of lengths, diameters, and configurations, have been proven both effective and durable through decades of continuous operation.

Meyer customers benefit from the company's 50+ years of experience in fabricating Spiral Chutes. This experience is a part of every professionally crafted Meyer Spiral Chute, resulting in equipment of unmatched quality and long-term integrity.
