

MEYER[®]
INDUSTRIES, INC.

SANITARY BELT CONVEYORS

Sanitary Belt Conveyors from Meyer Industries combine proven designs with durable, highly sanitary construction.

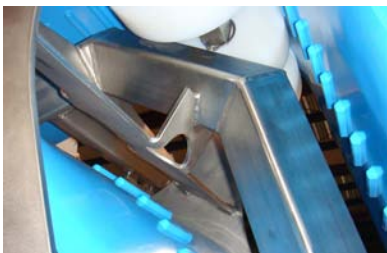

SANITARY BELT CONVEYORS

Proven Design and Durable Construction

Sanitary Belt Conveyors from Meyer combine proven designs with durable, highly sanitary construction that results in a dramatic reduction in clean up time compared to modular belting. They are available in a wide range of sizes and configurations to accommodate the inspection, storing or transporting of product. Some of the options available include: a wide range of pulley and belting style, one piece or modular frame construction, and removable belting from the side. The all stainless steel construction makes this belt series ideal for use in heavywash down environments

- **Extremely Sanitary Construction:** Sealed tubing is used for the main frame and supports make this design super sanitary.

- **Increased Belt Life:** Compared to modular belts which can trap debris and wear away at connection points, the solid core construction of this style of belting greatly decreases replacement intervals.
- **Reliable Belt Tracking:** Positive sprocket driven belting ensures consistent belt tracking.
- **Reduced Clean Up Time:** The highly sanitary construction results in a dramatic reduction in clean up time.
- **Custom Designs:** Meyer conveyors are designed to meet your requirements. Various drive types, belt styles, and pulleys can be supplied.

Tubular stainless steel construction

Polymer standoff bearings with stainless steel inserts

Positive belt drive

Removable belt support rails

Available with one piece removable belting

Can handle a wide variety of products
